

BOXING AND PALLETIZING CELL

Complete automation
for the whole industry

INTEGRATED SOLUTION

Innovation in every step.

BOXING AND PALLETIZING

Cell

Product transportation, box making and sealing, packing and palletizing. All in a single equipment. The G3 Automation® boxing and palletizing cell integrates several operations into high-performance automation, in order to reduce production costs and optimize the use of the manufacturing area.

The automation cell receives the products by a conveyor belt, putting them into the boxes, where they go through a continuous assembly and sealing process, to be delivered to a palletizing robot, responsible for transferring them to a pallet.

This automation comes as an innovative solution for those in need to take their intralogistics processes to the next level, with an adaptable concept to the most diverse options of products and boxes dimensions.

Integrated automation

Box making, boxing process, sealing and palletizing;

Flexibility to meet several types of products;

HMI touchscreen with friendly and intuitive interface;

Automation according to NR 12 standard;

Laser curtain for greater safety in pallet delivery;
